Expertise in Power Protection

Mersen is a global expert in electrical power and advanced materials for high-tech industries. With more than 135 years of experience, the company is represented in over 50 industrial locations and 16 R&D centres in 35 countries.

Mersen Electrical Power offers a broad product portfolio in the area of electrical protection and control. Mersen offers solutions for power management applications, for the development and delivery of custom tailored solutions and key products for various key markets such as trade, industry, renewable energies, power electronics and eMobility. The teams at Mersen Electrical Power work together with customers around the world with Mersen's mission to make customer applications safer and more reliable.

Mersen is a world leader in fuse technology with a powerful presence in the circuit protection market, Mersen Electrical Protection Activity offers innovative solutions to enhance the safety of low voltage installations and equipment.

Above and beyond the supply of products, the company also provides added value in the form of technical support for OEMs, electrical contractors, panel builders, plant maintenance departments and utilities.

As a global player, Mersen has established production facilities on every continent to optimise the availability of products (France, Tunisia, United States, Canada, Mexico, India, Japan and China). All these locations are united around a global quality, safety and environment policy.

The world-class organisation of Mersen offers tried, tested and approved solutions ensuring the safety and integrity of our customers equipment protected devices and the safety of people working around them. Additionally guarding our customer's electrical equipment and installations over the long term, Mersen can offer the widest range of safe, reliable electrical and thermal protection solutions.

Mersen solutions are sold all over the world at over 4500 points of sale through professional distributors of electrical common equipment.

An aerial photograph of an industrial facility at dusk. Two tall, dark smokestacks rise from the complex, with wisps of white smoke or steam drifting from their bases. The sky is a deep, clear blue, transitioning to a soft orange and pink glow near the horizon. The industrial buildings are large, rectangular structures with flat roofs. Some buildings have vertical light strips that are illuminated from within, casting a warm, yellowish glow. In the foreground, there are more buildings, some with large glass windows that are brightly lit from the interior. The overall scene is a blend of industrial architecture and natural light from the setting or rising sun.

APPLICATIONS

BS88 LV FUSES AND FUSE HOLDERS

Mersen BS88 fuses UKCA and CE approved

Mersen's comprehensive range of BS88 low voltage fuses and fuse holders have been developed to answer today's demands in various industrial applications, including areas such as motor protection, utility, cable and device protection which with our high level performance fuses protect installations and keep people safe in residential and industrial buildings.

With proven experience in electrical protection, Mersen supports you in defining your needs according to your application. Furthermore, overcurrent protection for any low voltage electrical circuit is guaranteed by our design and manufacture.

Mersen provides you with high quality products in compliance with ISO 9001 standard.

All the circuit protection solutions shown in this catalogue are compliant with the RoHS European Directive. Mersen BS88 fuses are UKCA and CE approved.

For your own safety do NOT open BS88 fuse holders on load.

All items except those marked with * are ASTA 20 certified.

Power dissipation chart

APPLICATION INFORMATION

Voltage rating selection

BS88 fuses comply with IEC 60269 standards. They are tested under a voltage at least 10% higher than the fuse rated voltage.

Ambient temperature

Above an ambient of 40°C a general de-rating of 0.5% of the fuse-link rated current per excess degree centigrade is recommended.

Cable protection

gG fuses protect cables against both overload and short circuit. The cable is protected when the following conditions are fulfilled.

$$I_B \leq I_N \leq I_z$$

$$I_F \leq 1.45I_z$$

I_B : Operating current of the cable

I_z : Maximum current carrying capacity of the cable

I_N : Rated current of the fuse

I_F : Conventional fusing current of the fuse

Capacitor circuit protection

The fuse selection must take into account:

- The inrush current occurring when the capacitor is switched on.
- The harmonic currents during the normal operation of the network.
- Capacitor tolerances.

The fuse link should be chosen with a current rating greater than 1.7 times the rated capacitor current. Correction for ambient temperature higher than 40°C must be added.

Transformer protection

Fuses must be fitted both in the primary and the secondary of the transformer. The fuse selection must take into account the high transient inrush current in the primary of the transformer. Consequently the normal current rating of the fuse links on the primary side of transformers should be at least twice the nominal transformer primary current. The normal I_n value of the fuse links on the secondary side of transformers is at least equal to the nominal transformer secondary current when the temperature does not exceed 40°C.

Motor circuit protection

The motor starter manufacturers generally recommend the fuse link rating to be used in conjunction with the motor starter. Type 2 co-ordination is easily obtained with Mersen fuses in view of having the pre-arcing I^2t values closer to the lower limit of the specified limits of the standard. The gM fuse selection as for an aM fuse requires the melt current at 5 seconds is 7 times the fuse rating.

Protection against electrical shock

The rule is to disconnect within a time specified by local standards. Generally wiring regulations require a disconnecting time not exceeding 5 seconds for a distribution circuit. It will be less than 1 second in many other cases. The maximum value of each fault loop impedance (Z_s) for gG fuse link for BS88: part 2 & 6 are as shown at 240V.

BS88 FUSE HOLDERS & NEUTRAL LINK

For Offset Blade & Bolted Tag Fuse Links

For Offset Blade & Bolted Tag Fuse Links

Fuse holders from Mersen comply with BS88-1 and BS88-6: 1988. The fuse holders are designed to prevent direct contact with live parts when being inserted or removed, preventing any likelihood of inadvertent contact with live metal. Also, cable terminals within the fuse base are fully shrouded when holder is removed (product is IP2X Classified).

Type Of Connection

BFF Front wire connected
(front-front) 3 connection styles possible: Mounting on board with cable upstream and downstream

BBB Back stud connected
(back-back) Mounting on board with two cables on the back (connection via lug, see table)

BFB Front Back (busbar) stud connected Mounting on board with upstream or downstream cable and back cable

Advantages

1. DIN Rail Mounting for ease of assembly
2. Safety Shrouds
3. Options for colour and terminations
4. RoHs compliance

CYLINDRICAL
FUSES FOR STREET
LIGHTING PROTECTION

BLD/BMD/BLST FUSE LINKS

Simplicity and high reliability

The majority of existing street lighting networks are normally protected by a common Feeder Protection Device (FPD). FPD is based on a simple overcurrent unidirectional technique to protect against faults on the street lighting cables. The Mersen fuse technology ensures safety in street lighting applications by providing better coordination, immediate isolation and ensures fire safety through safe and correct fuse selection.

All the circuit protection solutions shown in this catalogue are ASTA 20 certified* and comply with the RoHS European Directive. Mersen BS88 fuses are UKCA and CE approved.

For your own safety do NOT open BS88 fuse holders on load.

* Note that any items marked with * are not ASTA 20 certified.

FEEDER PILLAR FUSE LINKS

Ensuring continuous service

The Mersen range of Low Voltage Feeder Pillar Fuse Links are designed for the use with wedge type fuse carriers with fixing centres of 82mm and 92mm. These are primarily for use by Electricity Supply Industries in distribution pillars, open type substation boards, heavy duty service cut-outs and underground disconnecting boxes.

The Mersen range of House Service Fuse Links are designed for the use in consumer distribution boards, electricity control units, houses and office buildings.

All the circuit protection solutions shown in this catalogue are ASTA 20 certified* and comply with the RoHS European Directive. Mersen BS88 fuses are UKCA and CE approved.

For your own safety do NOT open BS88 fuse holders on load.

* Note that any items marked with * are not ASTA 20 certified.

APPLICATION INFORMATION

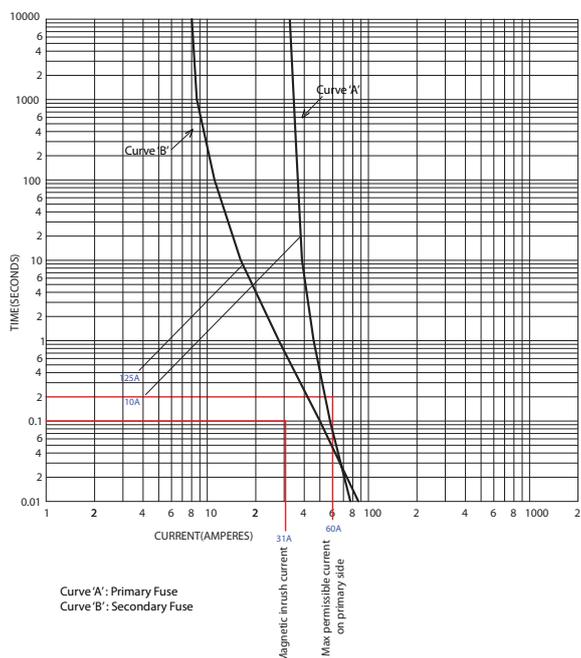

Selection Procedure for Feeder Pillar Fuse Links for protection of distribution transformer

Mersen range of feeder pillar fuse-links have wedge tightening contacts of standard dimensions (82mm & 92mm) and performance intended for use in a.c. electricity supply networks. These fuses comply as per IEC60269-2, BS: 88 Part 5 requirements.

Selection:

1. The primary fuse side is selected as per table below based on transformer ratings.

RATED VOLTAGE RANGE OF FUSE-LINK (KV)		3/7.2		6/12		10/24		20/36	
SERVICE VOLTAGE OF TRANSFORMER (KV)		6		10		20		30	
REL. SHORT CIRCUIT VOLTAGE	TRANSFORMER OUTPUT (KVA)	TRANSFORMER RATED CURRENT (A)	RATED CURRENT OF FUSE-LINK (A)	TRANSFORMER RATED CURRENT (A)	RATED CURRENT OF FUSE-LINK (A)	TRANSFORMER RATED CURRENT (A)	RATED CURRENT OF FUSE-LINK (A)	TRANSFORMER RATED CURRENT (A)	RATED CURRENT OF FUSE-LINK (A)
Uk = 4%		4.8	16-20	2.9	10	1.5	4	0.96	2-6.3

APPLICATION INFORMATION

The following procedure for selecting secondary fuse should be observed (Feeder Pillar fuse):

- a) Transformer ratings
 - Service voltage (U)
 - Rated output (S)
 - Relative short-circuit voltage (UK 4%)
 - Inrush current (factor 8..12 IN)
- b) Time current characteristics of HV/LV fuse links

3. Procedure based on an example:

A 50 kVA transformer has a transformer rated primary full load current of 2.6A with a ratio 11kV/415V. The short circuit current on secondary terminal short-circuit is given from the relative short-circuit voltage. The fuse should be selected to operate within 2 seconds as the transformer is designed to withstand minimum short circuit current (25 IN) for 2 seconds. The primary fuse link is selected to ensure withstand of primary inrush current of 12 IN for 0.1 seconds.

Selection of secondary fuse is based on the full load current which includes 130% overload withstand for 3 hours (secondary maximum current is 90.5A) and with temperature correction factor, the fuse-link rating of 125A is selected (Please refer to Mersen Feeder Pillar fuse range-BJU42V125PA).

To check whether the selected fuse is ok, the following conditions need to be satisfied.

- Referring to the curve above which consists of primary fuse time-current curve along with the secondary fuse time-current curve reflected on to primary, it is found that the selected secondary fuse will be operated within 2 seconds for minimum Short Circuit fault current on secondary side, thus protecting transformer from secondary faults
